

Keep your property looking beautiful.

You've made a huge investment in your home. Your next step is to keep it looking beautiful. Unfortunately, sunlight can fade fabrics, window treatments, wallpaper, natural wood floors, photos, paintings and other valuables in your home.

3M™ Window Films can block up to
99%
of the sun's UV rays

Proven. Trusted. Guaranteed.

When it comes to protecting your family and home, turn to a company you can trust. 3M was issued the first patent for sun control window film in 1966, and we keep inventing new ways to protect and enhance your life.

With millions of square feet of 3M™ Window Films installed around the world, we stand behind our products. 3M™ Window Films are backed by a limited lifetime warranty on residential applications, one of the most comprehensive warranties you can get.

Hassle-free, certified installation.

3M authorized dealers are proven experts in helping solve problems like issues with fading, temperature imbalances and excessive glare.

Contact your local 3M™ Authorized Window Film Dealer Installer for a free estimate. For more information, please call 1-866-499-8857 or visit us at 3M.com/WindowFilm.

3M™ Window Films

Protecting what's most precious.

Protected by 3M™ Window Film

Outsmart the sun with superior protection.

Unfiltered sunlight that comes through windows can expose your family and possessions to damaging effects of the sun, including harmful ultraviolet (UV) rays.

3M™ Window Films deliver superior fade control and UV protection to help you keep your family, possessions and home protected.

3M™ Window Films tackle the three major causes of fading.

Our films reduce the effects of solar heat and visible light on furnishings and block up to 99% of the sun's UV rays — the single largest cause of fading. Depending on the film you select, you can enjoy up to 79% reduction in solar heat.

While no film can stop fading completely, our films dramatically slow the progress of fading to keep your possessions looking beautiful longer.

Causes of fading

Other advantages of 3M™ Window Films:

Greater comfort and energy savings

On a warm day, sunlight streaming through windows can dramatically increase temperatures inside your home. All that heat can run up your energy bill when your air conditioner tries to keep up. By rejecting up to 79% of the sun's heat, 3M™ Window Films help keep your family cooler, more comfortable and on budget.

Less glare

It can be frustrating to work on a computer or watch TV in a sunlit room. Our films significantly reduce that annoying glare, so you can get your work done and relax without added eye discomfort.

Protect your loved ones from damaging UV rays.

Most people know that prolonged exposure to sunlight can lead to skin cancer. But did you know that being inside doesn't mean you're protected? If you frequently sit by windows, one of the recommended safeguards against UV damage is window film.

3M™ Window Films block up to 99% of UV rays. That means an added level of protection for your family, every day.

Are you protected? See for yourself.

This graphic is specifically designed to turn purple when it detects UV rays. Place it in sunlight coming through your windows and see if your windows protect you from damaging UV rays.

Skin cancer facts.*

- ▶ People who get a lot of exposure to UV rays are at greater risk for skin cancer.
- ▶ Skin cancer is the most common of all cancers. About 3.5 million cases of skin cancer are diagnosed in the U.S. each year.
- ▶ Melanoma, a more dangerous type of skin cancer, will account for more than 73,000 cases of skin cancer.

Museums and historic registered buildings around the world count on 3M™ Window Films to help protect their valuable collections from the damaging sun.

Our films also provide superior heat rejection and reduced glare to keep visitors cooler, more comfortable.
